                                                                                                                                                                                                                                                                                                                                                         The patent discloses the use of KDEL receptor inhibitor to promote Secretion of proteins that are normally retained within the cell such as the heat shock proteins by inhibiting KDEL receptor-mediated return of protein complexes to endoplasmic reticulum. This makes the secreted heat shock proteins more accessible to the immune system and improves immune response to a target antigen. The inhibitor protein comprises several subunits where each subunit comprises an oligomerisation domain and has at its carboxy terminus a region which binds to a KDEL receptor. The target antigen may be associated with diseases including neoplasia such as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and castromytoma, with defective tumour suppressor genes, oncogenes, infectious diseases, allergy or autoimmune diseases. The present sequence is KDEL receptor inhibitor comprising regions encoding a camel Igg clawable signal peptide; the oligomerisation domain, a camel Igg clinker domain and the carboxy-terminal sequence KDEL. The subsequence CC disease an alteration of rat COMP which provides increased stability via disulphide bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Inhibitors of the KDEL receptor which domain useful for promoting secretion retained within the cell -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                  The patent discloses the use of KDEL receptor inhibitor to promote secretion of proteins that are normally retained within the cell such as heat shock proteins by inhibiting KDEL receptor-mediated return of protein complexes to endoplasmic reticulum. This makes the secreted heat shock proteins more accessible to the immune system and improves immune response to a target antigen. The inhibitor protein comprises several subunits where each subunit comprises an oligomerisation domain and has at its carboxy terminus a region which binds to a KDEL receptor. The target antigen may be associated with diseases including neoplasia such as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chimeric -

The present sequence is KDEL receptor inhibitor comprising regions encoding a cleavable signal peptide, the olligomerisation domain of human thrombospondin 4 (TSP4) trimerisation domain; a camel IgG linker domain and the carboxy-terminal sequence KDEL. The subsequence GDCC is an alteration of rat cartilage oligomeric matrix protein which provides increased stability via disulphide bonds.

                                                                                                                 The patent discloses the use of KDEL receptor inhibitor to promote secretion of proteins that are normally retained within the cell such as heat shock proteins by inhibiting KDEL receptor-mediated return of the heat shock proteins more accessible to the immune system and improves immune response to a target antigen. The inhibitor protein comprises several subunits where each subunit comprises an oligomerisation domain and has at its carboxy terminus a region which binds to a KDEL receptor. The target antigen may be associated with diseases including neoplasia such as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and astromytoma, with defective tumour suppressor genes, oncogenes, infectious diseases, allergy or autoimmune diseases. The present sequence is KDEL receptor inhibitor protein domain from rat cartilage oligomeric matrix protein (COMP); a camel IgG linker domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 200

                 The patent discloses the use of KDEL receptor inhibitor to promote secretion of proteins that are normally retained within the cell such as heat shock proteins by inhibiting KDEL receptor-mediated return of the complexes to endoplasmic reticulum. This makes the secreted heat shock proteins more accessible to the immune system and improves immune response to a target antigen. The inhibitor protein comprises several subunits where each subunit comprises an oligomerisation domain and has at its carboxy terminus a region which binds to a KDEL receptor. The target antigen may be associated with diseases including neoplasia such as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and as tarromytoma, with defective tumour suppressor genes, oncogenes, infectious diseases, allergy or autoimmune diseases. The present sequence is KDEL receptor inhibitor comprising regions encoding a cleavable signal peptide; the oligomerisation domain of human thrombospondin 3 (TSP3) trimerisation domain, a camel IGG linker domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chimeric

This makes the secreted heat shock proteins more accessible to the immune system and improves immune CC response to a target antigen. The inhibitor protein comprises several CC subunits where each subunit comprises an oligomerisation domain and has tits carboxy terminus a region which binds to a KDEL receptor. The CC target antigen may be associated with diseases including neoplasia such CC as sarcoma, lymphona, leukemia, melanoma, carcinoma, glichlastoma and CC infectious diseases, allergy or autoimmune diseases. The present CC eleavable signal peptide; a myc-tag; an N-glycosylation sequence; the C1 digomerisation domain of rat cartilage oligomeric matrix protein CC (COMP); a camel IgG linker domain and the carboxy-terminal sequence CC KDEL. The subsequence GDCC is an alteration of rat COMP which provides increased stability via disulphide bonds.

The patent discloses the use of KDEL receptor inhibitor to promote CC secretion of proteins by inhibiting KDEL receptor-mediated return of CC heat shock proteins by inhibiting KDEL receptor-mediated return of CC protein complexes to endoplasmic reticulum. This makes the secreted heat shock proteins more accessible to the immune system and improves immune CC response to a target antigen. The inhibitor protein comprises several CC subunits where each subunit comprises an oligomerisation domain and has CC at its carboxy terminus a region which binds to a KDEL receptor. The CC target antigen may be associated with diseases including neoplasia such CC as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and CC astromytoma, with defective tumour suppressor genes, oncogenes, CC infectious diseases, allergy or autoimmune diseases. The present CC sequence is KDEL receptor inhibitor protein comprising regions including a cleavable signal peptide; the oligomerisation domain and the CC cartilage oligomeric matrix protein; a camel IgG linker domain and the

The patent discloses the use of KDEL receptor inhibitor to promote CC secretion of proteins that are normally retained within the cell such as CC heat shock proteins by inhibiting KDEL receptor-mediated return of CC protein complexes to endoplasmic reticulum. This makes the secreted heat shock proteins more accessible to the immune system and improves immune cresponse to a target antigen. The inhibitor protein comprises several cubunits where each subunit comprises an oligomerisation domain and has at its carboxy terminus a region which binds to a KDEL receptor. The ctarget antigen may be associated with diseases including neoplasia such CC as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and astromytoma, with defective tumour suppressor genes, oncogenes, CC infectious diseases, allergy or autoimmune diseases. The present CC sequence is KDEL receptor inhibitor comprising regions encoding a CC cleavable signal peptide; the oligomerisation domain of Xenopus CC thrombospondin 4 (TSP4) trimerisation domain including an additional CC thrombospondin 4 (TSP4) trimerisation domain including an additional companies of a camel IgG linker domain and the carboxy-terminal sequence KDEL. The subsequence GDCC is an alteration of rat cartilage oligomeric matrix protein which provides increased stability via disulphide bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibitors of the KDEL receptor which comprises an oligomerization domain useful for promoting secretion of proteins which are normally retained within the cell -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             KETTERING INST CANCER RES.

                                                                                     The patent discloses the use of KDEL receptor inhibitor to promote secretion of proteins by inhibiting KDEL receptor-mediated return of heat shock proteins by inhibiting KDEL receptor-mediated return of protein complexes to endoplasmic reticulum. This makes the secreted heat shock proteins more accessible to the immune system and improves immune response to a target antigen. The inhibitor protein comprises several cresponse to a target antigen. The inhibitor protein comprises several at its carboxy terminus a region which binds to a KDEL receptor. The crayet antigen may be associated with diseases including neoplasia such as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and astromytoma, with defective tumour suppressor genes, oncogenes, infectious diseases, allergy or autoimmune diseases. The present caleavable signal peptide; the oligomerisation domain of mouse thrombospondin 3 (TSP3) trimerisation domain including an additional sequence (KDEL receptor inhibitor comprising regions and additional sequence (KDEL The subsequence GDCC is an alteration of rat cartilage oligomeric contains and the carboxy-terminal sequence contains and including an additional sequence contains an alteration of rat cartilage oligomeric contains and alteration domain of mouse cartilage oligomeric contains and alteration domain sequence contains and alteration domain of mouse cartilage oligomeric contains and alteration domain of mouse cartilage oligomeric cartilage oligomeric contains and alteration domain of mouse cartilage oligomeric cartilag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric - Chimeric - )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KDEL receptor inhibitor; heat shock protein; immune respo oligomerisation domain; neoplasia; sarcoma; lymphoma; leu melanoma; carcinoma; glioblastoma; astromytoma; oncogene; infectious disease; allergy; autoimmune disease.

This makes the secreted heat Shock proteins more accessible to the immune system and improves immune CC response to a target antigen. The inhibitor protein comprises several CC subunits where each subunit comprises an oligomerisation domain and has care its carboxy terminus a region which binds to a KDEL receptor. The CC target antigen may be associated with diseases including neoplasia such CC as sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and CC infectious diseases, allergy or autoimmune diseases. The present CC sequence is KDEL receptor inhibitor comprising regions encoding a CC cleavable signal peptide; the oligomerisation domain of mouse CC thrombospondin 3 (TSP3) trimerisation domain; a camel IGG linker domain CC and the carboxy-terminal sequence KDEL. The subsequence GDCC is an CC increased stability via disulphide bonds.

The patent discloses the use of KDEL receptor inhibitor to promote CC secretion of proteins that are normally retained within the cell such as CC heat shock proteins by inhibiting KDEL receptor-mediated return of CC heat shock proteins by inhibiting KDEL receptor-mediated return of CC protein complexes to endoplasmic reticulum. This makes the secreted heat shock proteins more accessible to the immune system and improves immune cresponse to a target antigen. The inhibitor protein comprises several combinits where each subunit comprises an oligomerisation domain and has at its carboxy terminus a region which binds to a KDEL receptor. The CC target antigen may be associated with diseases including neoplasia such cas sarcoma, lymphoma, leukemia, melanoma, carcinoma, glioblastoma and cc astromytoma, with defective tumour suppressor genes, oncogenes, confectious diseases, allergy or autoimmune diseases. The present comprone is KDEL receptor inhibitor comprising regions encoding a CC cleavable signal peptide; the oligomerisation domain of human carconnece is KDEL receptor inhibitor comprising regions encoding a CC cleavable signal peptide; the oligomerisation domain of human cc and the carboxy-terminal sequence KDEL. The subsequence GDCC is an alteration of rat cartilage oligomeric matrix protein which provides concerns to the carboxy-terminal sequence KDEL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oligomerisation domain; neoplasia; sarcoma; lymphoma; leu melanoma; carcinoma; glioblastoma; astromytoma; oncogene; infectious disease; allergy; autoimmune disease.

New nucleic acids are described which encode a protein comprising the second and third type 1 repeats of human TSP (thrombospondin)-1, but not the TGP (transforming growth factor)-beta activation region of human TSP-1. The nucleic acid of TSP (thrombospondin)-1 containing the second and third type-1 repeats and the COMP (cartilage oligomeric matrix protein) assembly sequence (COMP/TSP-1) was produced by PCR (polymerase chain reaction). Expression of COMP/TSP-1 caused inhibition of the growth of tumours in mice models. Thus the nucleic acids and proteins may be useful for treating
                                                                                                                                                                          Nucleic acids encoding chimeric proteins such as cartilage oligomeric matrix protein (COMP)/thrombospondins (TSP)-1 and 2, useful for inhibiting angiogenesis and treating diseases such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TSP-1; TSP-2; COMP; cartilage oligomeric matrix protein; thrombospondin; angiogenesis; tumour; treatment; cancer; arthritis; psoriasis; diabetic retinopathy; corneal graft
                                                                                                                                                                                                                                                                                                                                              01-FEB-1999;

The nucleic acid of TSP (thrombospondin)-1 containing CC the second and third type-1 repeats and the COMP (carrilage CC oligomeric matrix protein) assembly sequence (COMP/TSP-1) was CC produced by PCR (polymerase chain reaction). Expression of COMP/TSP-1 CC caused inhibition of the growth of tumours in mice models. CC Thus the nucleic acids and proteins may be useful for treating CC angiogenesis related diseases such as cancer (by reducing the rate of CC growth and size of tumours), arthritis, psoriasis, diabetic CC retinopathy, corneal graft rejection, and glaucoma. They may also be CC used for treating human immunodeficiency virus (HIV) infection. CC Anti-angiogenic therapy has little toxicity, does not require the therapeutic agent to enter tumour cells or cross the blood-brain CC barrier, controls tumour growth independently of growth of tumour cell heterogeneity, and does not induce drug resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alignment Scores:

The nucleic acid of TSP (thrombospondin)-1 containing the second and third type-1 repeats and the COMP (cartilage oligomeric matrix protein) assembly sequence (COMP/TSP-1) was produced by PCR (polymerase chain reaction). Expression of COMP/TSP-1 caused inhibition of the growth of tumours in mice models. Thus the nucleic acids and proteins may be useful for treating angiogenesis related diseases such as cancer (by reducing the rate of growth and size of tumours), arthritis, psoriasis, diabetic retinopathy, corneal graft rejection, and glaucoma. They may also be
                                                                                                                                                                                                                                                                                                                                                    used for treating human immunodeficiency virus (HIV) infection. Anti-angiogenic therapy has little toxicity, does not require the therapeutic agent to enter tumour cells or cross the blood-brain barrier, controls tumour growth independently of growth of tumour cell heterogeneity, and does not induce drug resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding chimeric proteins such as cartilage oligomeric matrix protein (COMP)/thrombospondins (TSP)-1 and 2, useful for inhibiting angiogenesis and treating diseases such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-FEB-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-FEB-2000; 2000WO-US02482

                                                                                                                                                    The invention comprises a method of detecting a breast cancer-associated transcript in a cell from a patient. The method of the invention involves contacting a biological sample from the patient with a nucleotide that hybridises to one of the 69 breast cancer-associated gene sequences shown in the specification. The method of the invention is useful in the diagnosis or prognosis of breast cancer, and for detecting genes that are up or down-regulated in breast cancer cells. Genes identified by the method of the invention can be used in diagnostic purposes and also as targets for screening for therapeutic compounds that modulate breast cancer (e.g. hormones or antibodies). Identification of genes that are over or under expressed in breast cancer can additionally provide high-resolution, high-sensitivity datasets which can be used in the areas of diagnostics, therapeutics, drug development, pharmacogenetics, protein attribute and biogeneral benefits.

```

The present invention describes a method for assessing whether a patient is affilicted with breast cancer. The method comprises comparing the level of expression of a marker (gene/polypeptide see ACC50076 to ACC50334 and ABR47386 to ABR47632) in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a

g whether a patient comparing the level

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
